BH Coastal Finwood Paneling- The Informed Choice

Uniquely designed and manufactured for flexibility of application to meet the wide ranging needs of modern design architecture.

BH Coastal Finwood paneling is manufactured using state of the art wood engineering technology that features these qualities:

- . The surface is fine vertical grain BC softwood.
- . Quarter sawn veneers add to the stability of the surface
- . The paneling expands and contracts far less than solid, single layer softwood.
- . We use industry best 9 layer cross-ply Birch hardwood core.
- . The adhesives are rated for high moisture and heat resistance
- . Engineered paneling is ideal for use where seasonal humidity and temperature changes are a concern.
- . Suitable for interior wall and ceiling application as well as unexposed exterior purposes like soffit.
